/Prabodh M Dharia/
Primary Examiner, Art Unit 2629

1. **Status:** Please all the replies and correspondence should be addressed to Examiner's new art unit 2629. Receipt is acknowledged of papers submitted on 04-21-2008 under amendments and request for continued examination (RCE), which have been placed of record in the file. Claims 1-4, 10, 12, 13 and 15-18 are pending in this action. Claims 5-9, 11 and 14 are cancelled.

Response to Amendment

2. The amendment filed 03-19-2008 does not introduce any new matter into the disclosure. The added material is supported by the original disclosure. Applicant has amended independent claims 1 and 12 by adding allowable limitations and cancelling dependent claims 5-9, 11 and 14 to expedite allowance of the instant application.

3. Applicant has amended claims 1 and 12 by adding allowable limitations and cancelling dependent claims 5-9, 11 and 14 to expedite allowance of the instant application. Claims 10 and 17 were allowed on merits in previous office action mailed on 12-20-2007. Applicant's arguments filed on 03-19-2008 are convincing. As argued by applicant in under remarks regarding allowable limitations; for independent Claims 1 and 12, "a plurality of conductive lines formed at an outer side of the image display part and on the first substrate to supply gate driving signals to the gate driving integrated circuits to be supplied to the gate lines; a first control signal line on the gate tape carrier packages, the first control signal line being connected to the conductive lines to supply a first control signal to the gate driving integrated circuits mounted on the gate tape carrier packages so that the gate lines of the image display part may be sequentially driven from the first one to the last one by applying the first control signal to the first one

through a first signal path having the conductive lines and the first control signal line on the gate tape carrier packages; a second control signal line on the gate tape carrier packages, the second control signal line being connected to the conductive lines to supply a second control signal to the gate driving integrated circuits mounted on the gate tape carrier packages so that the gate lines of the image display part may be sequentially driven from the last one to the first one by applying the second control signal to the last one through a second signal path having the conductive lines and the second control signal line on the gate tape carrier packages; and a first controller to supply the first and second control signals to the first and second control signal lines” For Claims 1-4, 12, 13, 15, 16 and 18 and “a first control signal line formed together with the conductive lines for supplying a first control signal to the gate driving integrated circuits so that the gate lines of the image display part may be sequentially driven from the first one to the last one; a second control signal line formed together with the conductive lines for supplying a second control signal to the gate driving integrated circuits so that the gate lines of the image display part may be sequentially driven from the last one to the first one; and a first controller for supplying the first and second control signals to the first and second control signal lines and a shorting line mounted at an edge of the first substrate to electrically connect an end of the first control signal line and an end of the second control signal line extended from the last gate driving IC” For Claims 10 and 17 are persuasive; as after further extensive search and consideration, the amended independent claims 1, and 12 do overcome the prior art rejection mailed on 12-20-2007, therefore the prior art rejection is withdrawn; which puts application number 10,668606 is in condition for allowance.

Allowable Subject Matter

4. Claims 1-4, 10, 12, 13 and 15-18 are allowed.
5. The following is an examiner's statement of reasons for allowance:
6. Applicant has amended claims 1 and 12 by adding allowable limitations and cancelling dependent claims 5-9, 11 and 14 to expedite allowance of the instant application. Applicant's arguments filed on 03-19-2008 are convincing. As argued by applicant in remarks under claim rejection page 6, last two paragraphs, page 7, and page 8, paragraphs 1 and 2, prior art of Lim (US 2002/0039089 A1), Murade (US 2001/0022572 A1) and Aoki (US 5,966,115) with all of the other prior art cited on 892's 1449's, searched in NPL and searched in PGPUB, fails to recite or disclose the amended independent claims, all the other limitations of independent claims in combination with uniquely distinct features represented by underlined bold claim limitations recited below;

For Claims 1-4, 12, 13, 15, 16 and 18

a plurality of conductive lines formed at an outer side of the image display part and on the first substrate to supply gate driving signals to the gate driving integrated circuits to be supplied to the gate lines; a first control signal line on the gate tape carrier packages, the first control signal line being connected to the conductive lines to supply a first control signal to the gate driving integrated circuits mounted on the gate tape carrier packages so that the gate lines of the image display part may be sequentially driven from the first one to the last one by applying the first control signal to the first one through a first signal path having the conductive lines and the first control signal line on the gate tape carrier

packages; a second control signal line on the gate tape carrier packages, the second control signal line being connected to the conductive lines to supply a second control signal to the gate driving integrated circuits mounted on the gate tape carrier packages so that the gate lines of the image display part may be sequentially driven from the last one to the first one by applying the second control signal to the last one through a second signal path having the conductive lines and the second control signal line on the gate tape carrier packages; and a first controller to supply the first and second control signals to the first and second control signal lines.

For Claim 10 and 17

a first control signal line formed together with the conductive lines for supplying a first control signal to the gate driving integrated circuits so that the gate lines of the image display part may be sequentially driven from the first one to the last one; a second control signal line formed together with the conductive lines for supplying a second control signal to the gate driving integrated circuits so that the gate lines of the image display part may be sequentially driven from the last one to the first one; and a first controller for supplying the first and second control signals to the first and second control signal lines and a shorting line mounted at an edge of the first substrate to electrically connect an end of the first control signal line and an end of the second control signal line extended from the last gate driving IC.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
